

Golovin Potential Storm Impacts

Coastal Flood Warning

IMPACTS:

- Significant erosion and wave runup along the beach side of the village.
- Water may overtop the flood berm which protects the community from significant flooding. If this occurs, there will be more impactful flooding with water reaching the north side of the school and flooding some structures.
- Wind damage to structures and power outages possible.

What to Expect:

Water levels: 11-14 feet above the normal highest tide line

Timing: The highest water levels will occur Saturday evening.

Winds: South winds 40 to 50 mph with gusts up to 80 mph possible.

Golovin Potential Storm Impacts

This map or figure was prepared in cooperation with the Alaska Division of Geological & Geophysical Surveys with funding from the Alaska Ocean Observing Systems. Elevation data on the map are derived from digital surface models. Temporal changes, human or naturally induced, may have occurred that will cause the elevations depicted on these map figures to no longer represent actual surface conditions. These maps illustrate elevation and are not intended for use in the definition of flood zones. Flood levels are not perfectly flat and will not directly correspond to specific elevations. Vertical and horizontal accuracies vary by location.

Red is the anticipated area of inundation for water levels of 11ft above the normal highest tide line. This does not account for wave run-up.
